PROJECTS

AI-Based Intrusion Detection System

- Built ML-based system to detect malicious network traffic using CICIDS and NSL-KDD datasets.
- Implemented Random Forest and Neural Network classifiers; achieved high accuracy with low false positive rate.
- Evaluated performance using precision, recall, F1-score, and confusion matrix.

End-to-End LLM Chatbot (RAG-Based)

- Developed a ChatGPT-like conversational AI using Retrieval-Augmented Generation (RAG) architecture.
- Integrated LangChain with FAISS vector store for document retrieval and context-aware responses.
- Implemented persistent conversation memory for multi-turn dialogue.

AI Resume Screening System

- Designed NLP pipeline to automate resume screening and ranking against job descriptions.
- Used sentence embeddings and cosine similarity scoring to rank candidate profiles.

Image Generation using Diffusion Models

- Implemented text-to-image generation using Stable Diffusion via pre-trained HuggingFace models.

Job Tracker Dashboard

- Built full-stack web app with React.js and Firebase to track job applications with filtering, status tracking, and analytics.

ACHIEVEMENTS

- Qualified **GATE 2025** with a score of **628** in Computer Science.
- Served as **Internship Coordinator**, managing training and placement activities for the department.
